	Meter	Inches
Pilot and PAX	1.800	70.90
FUEL	2.209	86.97
BAGGAGE	2.417	95.16

To compute weight and balance:

- 1. Get moments from loading charts
- 2. Obtain the empty weight and moment from the most recent weight and balance
- 3. Insert the weights and the moments for fuel, occupants and baggage from the previous chart
- 4. Sum the weight and the moment columns
- 5. Divide the total moment by the total weight to get the arm
- 6. Check that the total weight does not exceed maximum gross weight
- 7. Check that the arm falls within the C.G. range
